### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

## DETAILED ACTION

## Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/29/2008 has been entered.

## Claim Rejections - 35 USC § 102

The rejection of claims 1 and 5-12 under 35 U.S.C. 102(b) as being anticipated by

Matsudaira et al. (US 4,448,493) has been overcome by applicant's amendment to the claims.

# Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. The claims have been amended to reflect Applicant's cancellation of claim 3

The application has been amended as follows:

In claim 5, line 2, change, "Claim 3" to "Claim 1."

In claim 6, line 2, change, "Claim 3" to "Claim 1."

## Allowable Subject Matter

Claims 1 and 5-12 are allowed.

The following is an examiner's statement of reasons for allowance:

The instant claims are to a solid electrolyte including a complex compound which is composed of polyvinyl alcohol, water, and at least one inorganic compound selected from silicic acid compound, tungstic acid compound, molybdic acid compound, stannic acid compound, and zirconic acid compound, characterized by a part or all hydroxyl groups of the polyvinyl alcohol domain are acetalized by a reaction of aldehyde with said solid electrolyte including complex compound, and are transformed into acetal having less water absorption than that of an hydroxyl group. The prior art does not teach a solid electrolyte including a complex compound which is composed of an acetalized polyvinyl alcohol, water, and at least one inorganic compound selected from a silicic acid compound, tungstic acid compound, molybdic acid compound, stannic acid compound, and zirconic acid compound. The closest prior art is noted.

For example, Matsudaira et al. (US 4,448,493) teaches a solid electrolyte including a complex compound which is composed of polyvinyl alcohol, water, and at least one inorganic compound selected from silicic acid compound, tungstic acid compound, molybdic acid compound, stannic acid compound, and zirconic acid compound, characterized by being produced by replacing a part or all of hydroxyl groups of polyvinyl alcohol domain to groups each of which has a water absorption less than that of said hydroxyl group (see col. 4, line 27 to col. 6, line 60.) Partially acetylated PVA is taught in col. 6, lines 45-60.) Silicic, stannic, and zirconic acid compounds are taught. Titanium compounds are also taught (col. 4, lines 25-35.)

Application/Control Number: 10/765,862

Art Unit: 1795

The acid materials may be mixed. The mixture forms a complex compound as the moieties interact forming complex structures, for example, by hydrogen bonding. Other materials are added to the electrolyte layer including inks (see the examples) and electrode materials (col. 3 and col. 6-8.) The electrolyte is used in an electrochromic device. Acetalized hydroxyl groups are not disclosed in Matsudaira et al. Instead, Matsudaira et al. teaches the hydroxyl groups are acetylated i.e. they are esterified with carboxylic acid. The acetalizing reaction and resulting structure is described on page 24, (lines 10-15) and shown in figure 1(a).

Further, Sawa et al. (US 2003-007133) teaches a solid electrolyte including a complex compound which is composed of polyvinyl alcohol, water, and at least one inorganic compound selected from silicic acid compound, tungstic acid compound, molybdic acid compound, stannic acid compound, and zirconic acid compound, characterized by being produced by replacing a part or all of hydroxyl groups of polyvinyl alcohol domain to groups each of which has a water absorption less than that of said hydroxyl group (see paragraph, p, 21-41, claims 1-16.) PVA is noted and may be modified with glycols, making PVA less water absorbing (p. 49.) Silicic acid compounds are taught. Other additives are taught. The mixture forms a complex compound as the moieties interact forming complex structures, for example, by hydrogen bonding (p. 27.) The electrolyte is used in a fuel cell (p. 25, 71.) Sawa et al. (US 2003-007133) does not teach replacing a part or all of hydroxyl groups of polyvinyl alcohol domain wherein a part or all hydroxyl groups of the polyvinyl alcohol domain wherein a part or all

Because the prior art does not teach a solid electrolyte including a complex compound which is composed of an acetalized polyvinyl alcohol, water, and at least one inorganic compound, as claimed, the claims are allowed. Any comments considered necessary by

applicant must be submitted no later than the payment of the issue fee and, to avoid processing

delays, should preferably accompany the issue fee. Such submissions should be clearly labeled

"Comments on Statement of Reasons for Allowance."
